SUMMARY

AI Engineer and Data Scientist with production experience deploying LLM-integrated systems, REST APIs, and end-to-end ML pipelines. Built and shipped conversational AI, predictive analytics models, and GCP data pipelines across two internships. Seeking full-time roles in AI Engineering or Machine Learning where production reliability matters as much as model accuracy.

EDUCATION

Bachelor of Computer Science, University of Sargodha

2022 - 2026

Coursework: OOPS, DSA, Computer Networks, Internet Architecture and Protocols, AI, DAA, DB Systems, OS, DIP, Compiler Construction.

SKILLS

Languages	Python (advanced), C++, R, JavaScript, PHP
ML / AI	TensorFlow, Scikit-learn, XceptionNet (CNN), Decision Tree, Regression
LLM & AI Engineering	LLM integration, Conversational AI, Intent classification, REST API deployment
Data Engineering	Pandas, NumPy, GCP (BigQuery, Mage), MySQL, MongoDB, Dimensional modelling
Deployment & Infra	REST APIs, Microservices (.NET Core), Model serving, Data pipeline design
Visualisation & BI	Tableau, Interactive dashboards
Soft Skills	Team leadership, Cross-functional communication, Technical documentation

EXPERIENCE

Jnr. AI Engineer - Full Stack Developer

Jul 2024 - Nov 2024

Sofnix Pvt. Ltd

Islamabad, Pakistan

- **Improved system efficiency by 20%** as measured by task-completion throughput on internal automation workflows, by designing and deploying ML models for predictive analytics using Python and TensorFlow, exposing inference results through REST API endpoints consumed by the production .NET Core backend.
- **Boosted customer engagement by 15%** as measured by session retention metrics, by building and deploying conversational AI systems with LLM integration, handling intent classification, context management, and response generation, connected to downstream services via a microservices architecture.
- **Reduced query latency by optimising data pipeline design** as measured by backend response times across high-traffic endpoints, by redesigning MySQL schemas and structuring efficient data ingestion workflows to support real-time model serving requirements.

Assoc. Data Scientist

JUL 2025 - AUG 2025

Data Zenix

Karachi, Pakistan

- **Surfaced a linear correlation between GDP growth and external debt, and a rising poverty trend (40%)**, as measured by statistical model fit across five integrated economic indicators (GDP growth, inflation, poverty, external debt, unemployment), by building an end-to-end data pipeline in Python (Pandas, NumPy) that ingested, cleaned, and joined heterogeneous economic datasets, then exposed findings via an interactive dashboard deployed on GCP.
- **Achieved a Car Price Prediction MAE of 1.0** as measured against a held-out validation set, by implementing a Decision Tree Regressor with systematic feature engineering, hyperparameter tuning, and regression modelling best practices, delivering a production-ready model artifact with documented inference logic.

- **Sales Prediction & Advertising Channel Analysis** Identified TV ad spend as the dominant sales driver (coef: 0.046, $p < 0.001$) and Newspaper as statistically insignificant ($p = 0.86$), as measured by OLS regression diagnostics across three advertising channels (TV, Radio, Newspaper), by building a multi-channel Sales Prediction pipeline in Python (Pandas, Statsmodels, Scikit-learn) with EDA, correlation analysis, and a Linear Regression model achieving R^2 of 0.897 on 200 advertising records.

PROJECTS

UOS Assistant - AI Inbound Calling Agent · Conversational AI · Python · FastAPI · OpenAI · pgvector · Google STT/TTS · Architected and led a four-person team delivering an end-to-end voice-driven calling agent that processes inbound calls through a Google STT → FastAPI → RAG pipeline (OpenAI embeddings + PostgreSQL/pgvector) → GPT-4o Mini → Google TTS, enabling natural Urdu-language intent classification and contextually aware response generation at production scale. ([Github Repo](#))

Wavr - Real-Time Chat Application · Full-Stack · React · Node.js · Socket.io · MongoDB · Firebase · Deployed a production real-time messaging application on a MERN stack with Firebase Authentication for JWT-based user identity and Socket.io for sub-second message delivery, achieving zero-polling live presence tracking across concurrent users. ([Repo](#))

DeepFake Detection System Computer Vision · Python · TensorFlow · XceptionNet Achieved 95%+ face classification accuracy on a binary real/fake dataset by fine-tuning XceptionNet (CNN) on augmented training data, implementing transfer learning to reduce training time by 60% versus training from scratch. ([Checkout Github Repo](#))

Uber Data Analytics Pipeline Data Engineering · GCP · Python · Mage · Tableau Processed and modelled an Uber-scale trip dataset end-to-end, raw ingestion → dimensional schema design → orchestrated ETL via Mage → analytical dashboard deployed on GCP, reducing query time on aggregated trip data by 40% over flat-file analysis. ([Walkthrough](#))

AWARDS AND CERTIFICATIONS

- **Google Data Analytics Professional Certificate** (8 courses, Coursera) Completed end-to-end data analysis curriculum covering SQL, R, Tableau, and stakeholder reporting. ([Completion Badge](#)) ([LinkedIn](#))
- **IBM AI Engineer Professional Certificate** (8 courses, Coursera) Completed end-to-end AI engineering curriculum covering supervised/unsupervised learning, deep learning with Keras, PyTorch TensorFlow, LLM application development, RAG, generative AI agents, computer vision, and ML pipeline deployment on Apache Spark. ([Certifications](#))
- **Deloitte Australia Data Analytics Simulation** (Forage, Feb 2026) Analysed forensic datasets, built a Tableau dashboard surfacing anomalous transaction patterns, and presented findings as a business memo. ([Credentia](#))
- **Data Zenix Data Science Internship** (1 month) Delivered unemployment trend analysis and a production car price prediction model. ([Internship Completion Certification](#)) and ([LOR](#))
- **World Quant University Applied Data Science** Completed 8 end-to-end projects spanning time series, NLP, and classification modelling. ([Completion Badge](#)) ([LinkedIn](#))
